

CUES & AP QUESTIONS

NOTES

Why is Africa 'diverse' in AP World History context?

Name the 3 major African trade networks in this period.

What are the 4 major states/regions covered in Ch. 4?

AP EXAM TIP

AP exams frequently test Africa through the lens of trade. Always connect African states to the networks they participated in: Mali = trans-Saharan; Swahili Coast = Indian Ocean; Great Zimbabwe = interior trade connecting to both.

CCOT theme:

What was the role of Islam in African state-building 1200–1450?

COMMON MISTAKE

Africa was **NOT** isolated or 'primitive' in this period. Sub-Saharan African states participated actively in global trade networks and produced sophisticated political and architectural achievements.

AFRICA'S GEOGRAPHIC DIVERSITY

Africa is not one region — AP World History covers four distinct zones in this chapter. Each participated in different trade networks and developed distinct political forms:

- › **West Africa** (Mali, Ghana, later Songhai): Connected via trans-Saharan trade to North Africa and the Islamic world
- › **East Africa (Swahili Coast)**: City-states (Kilwa, Mombasa, Zanzibar) connected to the Indian Ocean trade network
- › **Central/Southern Africa (Great Zimbabwe)**: Interior kingdom controlling gold trade flowing to the Swahili Coast
- › **North Africa**: Mamluk Egypt (covered in Ch. 2); Berber/Arab kingdoms linking sub-Saharan Africa to Mediterranean

THREE MAJOR TRADE NETWORKS CONNECTING AFRICA

- › **Trans-Saharan trade**: Crossed the Sahara Desert via camel caravan; gold and salt as primary commodities; linked West Africa to North Africa and Mediterranean
- › **Indian Ocean trade**: East African Swahili Coast cities exported gold, ivory, enslaved people; imported porcelain, cloth, glassware
- › **Interior trade routes**: Connected Great Zimbabwe (gold source) to the Swahili Coast; agricultural products circulated within regions

ISLAM'S ROLE IN AFRICAN STATE-BUILDING

- › Islam arrived in West Africa via trans-Saharan trade routes — not military conquest
- › African rulers converted for commercial and diplomatic advantages (prestige, literacy, legal framework)
- › Islam in Africa was **syncretic** — adopted alongside traditional religious practices, not replacing them
- › Islamic scholars and merchants brought literacy (Arabic), which rulers used for record-keeping and law
- › Timbuktu emerged as a major center of Islamic scholarship by the 1300s

WHAT MAKES AFRICAN STATE-BUILDING DISTINCTIVE FOR AP

African states demonstrate that complex governance, long-distance trade, and cultural sophistication could develop independently of European or Asian models. Great Zimbabwe's stone construction, Mali's wealth, and the Swahili Coast's cosmopolitan port cities all challenge any simplistic narrative of African 'underdevelopment.'

AP TIP: Connect each African state to the trade network it participated in. This immediately shows global connectivity and earns analytical credit on any AP essay.

SUMMARY — Write the main idea of this page in your own words:

Africa in 1200–1450 = three overlapping trade zones: **trans-Saharan** (West Africa ↔ North Africa), **Indian Ocean** (Swahili Coast), and **interior routes** (Great Zimbabwe → coast). Islam arrived via trade, not conquest, and was adopted **syncretically**. African states were globally connected, commercially sophisticated, and architecturally impressive. Always connect states to their trade networks in AP essays.

CUES & AP QUESTIONS

NOTES

Mali Empire:

Founded when? By whom? What replaced Ghana?

Sundiata Keita

Who? What is his significance?

Mansa Musa

When did he rule? What is his AP exam significance?

His Hajj (1324–1325):

What happened? Why historically significant?

AP EXAM TIP

Mansa Musa = the AP exam's go-to evidence for: (1) West African wealth from gold trade, (2) Islam in sub-Saharan Africa, (3) global connections between Africa and the Islamic world. Know all three uses.

Timbuktu

What made it significant?

COMMON MISTAKE

The Mali Empire was not just about Mansa Musa's pilgrimage. Its foundation was ECONOMIC — control of the gold-salt trade — and its power outlasted Mansa Musa for decades.

FOUNDING OF MALI (c. 1235)

Sundiata Keita, a Mandinka warrior-king, defeated the Ghana Empire at the Battle of Kirina (c. 1235) and established the Mali Empire. The oral tradition of Sundiata's rise is preserved by **griots** (hereditary oral historians) — a key example of oral tradition as historical source. Mali controlled the Niger River valley and the critical gold-producing regions of West Africa.

MALI'S ECONOMIC FOUNDATION

- › **Gold:** The Bambuk and Bure goldfields produced gold that flowed north across the Sahara to North Africa, Egypt, and Europe — making West African gold essential to Mediterranean economies
- › **Salt:** Taghaza (Saharan salt mines) produced salt essential for food preservation; salt traveled south to West Africa in exchange for gold
- › **Control of trade routes:** Mali taxed all trans-Saharan trade passing through its territory — the key to its wealth
- › **Other exports:** Enslaved people, kola nuts, ivory

MANSA MUSA (r. 1312–1337) — Peak of Mali Power

- › Mali's most famous ruler; devout Muslim who performed Hajj to Mecca 1324–1325
- › **His entourage:** Reportedly 60,000+ people; 12,000 enslaved attendants; 80 camels carrying gold
- › **Cairo inflation:** Distributed so much gold in Cairo that he devalued gold across North Africa and the Middle East — gold prices reportedly depressed for over a decade
- › **European mapping:** After his pilgrimage, Mali appeared on European maps by 1375 (the Catalan Atlas showed Mansa Musa holding a gold nugget)
- › **Cultural patronage:** Brought Islamic scholars and architects (including Abu Ishaq al-Sahili) back to Mali; built mosques and madrasas in Timbuktu and Djenne

TIMBUKTU — Center of Islamic Scholarship

- › City on the Niger River; became Mali's cultural and commercial capital
- › **Sankore Mosque and University:** Major center of Islamic learning; thousands of students
- › Housed one of the world's largest collections of manuscripts — religious, mathematical, astronomical texts in Arabic
- › Demonstrates that West Africa was connected to the global Islamic intellectual world

GRIOTS — Oral Tradition as Historical Source

Hereditary storytellers, musicians, and historians who preserved African history through oral tradition. Essential for AP: they are primary sources for pre-literate and early literate African societies. The Sundiata epic was preserved by griots for centuries before being written down.

AP TIP: Mansa Musa's pilgrimage is a multi-purpose AP evidence piece — use it to discuss: Islamic Africa, trans-Saharan gold trade, global connections, and how Africa influenced economies far beyond its borders.

SUMMARY — Write the main idea of this page in your own words:

Mali Empire (1235–c.1400) = West Africa's dominant power, built on control of **gold-salt trans-Saharan trade**. Founded by **Sundiata Keita**; peaked under **Mansa Musa** (r. 1312–1337). Mansa Musa's Hajj (1324–1325) brought Mali to global attention and caused inflation in Cairo from gold distribution. **Timbuktu** = major center of Islamic scholarship. **Griots** preserved oral tradition — a key AP source type.

CUES & AP QUESTIONS

NOTES

What 2 commodities drove trans-Saharan trade?

Why was salt so valuable in West Africa?

What technological innovation made trans-Saharan trade possible?

What else traveled the trans-Saharan routes besides goods?

AP EXAM TIP

Trans-Saharan trade = the **mechanism connecting West Africa to the Islamic world**. In AP essays, always name: (1) what moved in each direction, (2) the camel as key technology, (3) Islam and literacy as cultural consequences.

Compare trans-Saharan to Indian Ocean trade:

How did control of the Saharan trade make West African rulers wealthy?

COMMON MISTAKE

The Sahara was **NOT** a barrier to trade — the camel made it a highway. Think of the Sahara as an 'ocean of sand' with caravan routes as shipping lanes.

THE GOLD-SALT EXCHANGE — Foundation of Trans-Saharan Trade

- › **West African gold:** Came from Bambuk and Bure goldfields (modern Guinea/Mali); sought by North African and Mediterranean economies for coinage and luxury goods
- › **Saharan salt:** Mined at Taghaza; essential for food preservation in tropical climates; West African populations had little local salt
- › Gold traveled NORTH; salt traveled SOUTH — classic complementary exchange
- › Both were essential commodities — salt was sometimes worth its weight in gold in West African markets

THE CAMEL — Technological Key to Trans-Saharan Trade

- › Camels introduced to North Africa from Arabia c. 300 CE; trans-Saharan trade expanded dramatically after
- › **Why camels:** Store water and fat in humps; can carry 400+ pounds; withstand extreme heat; travel 25+ miles/day in desert
- › Camel caravans could carry hundreds of merchants and tons of goods across the Sahara
- › The camel is the trans-Saharan trade's equivalent of the monsoon wind system for the Indian Ocean

WHAT ELSE TRAVELED THE ROUTES

- › **Islam:** Merchants brought Islamic practice; rulers converted for commercial and diplomatic advantages
- › **Literacy (Arabic):** Trade required record-keeping; Arabic script and Islamic education spread northward
- › **Enslaved people:** A significant part of trans-Saharan trade — enslaved people moved north to North Africa and the Middle East
- › **Kola nuts, ivory:** Also moved north from West Africa
- › **Cloth, horses, glassware:** Moved south from North Africa into West Africa

HOW RULERS PROFITED

West African kingdoms (Ghana, then Mali, then Songhai) controlled the trade routes and taxed every caravan passing through their territory. Mali's rulers also directly controlled the gold-producing regions. This taxation model — rather than direct production — was the basis of West African imperial wealth.

COMPARISON: TRANS-SAHARAN vs. INDIAN OCEAN TRADE

- › **Both:** Spread Islam via merchant diaspora communities; transmitted goods between distant economies
- › **Trans-Saharan:** Overland; camels; seasonal; gold-salt focus; more state-controlled
- › **Indian Ocean:** Maritime; monsoon-powered; dhows; spice/textile focus; decentralized merchants
- › **Key difference:** Indian Ocean was more commercially diverse and higher volume; trans-Saharan was more geographically constrained but equally transformative for the regions it connected

SUMMARY — Write the main idea of this page in your own words:

Trans-Saharan trade ran on **gold (north) ↔ salt (south)** exchange, made possible by the **camel**. West African rulers taxed caravans and controlled gold-producing regions. Cultural consequences: **Islam and Arabic literacy** spread south via merchants. Enslaved people also moved north. Comparison: trans-Saharan = overland, state-taxed, gold-salt focused; Indian Ocean = maritime, merchant-driven, spice-textile focused.

CUES & AP QUESTIONS

NOTES

What is the Swahili Coast?

Name 3 major Swahili city-states.

Kilwa

Why was it the wealthiest city-state?

What goods did Swahili cities export and import?

AP EXAM TIP

Swahili city-states = AP evidence for: (1) Indian Ocean trade connecting Africa to Asia, (2) Islam spreading via trade to East Africa, (3) cosmopolitan port cities where cultures mixed. Ibn Battuta visited Kilwa — use his account as a primary source.

What is 'Swahili' as a culture?

How did Islam arrive on the Swahili Coast?

COMMON MISTAKE

Swahili city-states were NOT colonized by Arab Muslims — they were African-led city-states with a mixed culture that incorporated Islamic and Bantu African elements. Arab traders were a commercial minority, not rulers.

THE SWAHILI COAST — Geography and Character

The East African coast from modern Somalia south to Mozambique — including offshore islands (Zanzibar, Pemba). The term '**Swahili**' comes from Arabic (sawahil = 'coasts').

Swahili culture is a **synthesis of Bantu African and Arab-Islamic influences** — a product of centuries of Indian Ocean trade contact. Swahili language blends Bantu grammar with Arabic vocabulary.

MAJOR SWAHILI CITY-STATES

- › **Kilwa (modern Tanzania):** Wealthiest; controlled the gold trade from interior Great Zimbabwe; Ibn Battuta called it one of the world's most beautiful cities
- › **Mombasa (modern Kenya):** Major port; important for Indian Ocean trade connecting to India and Arabia
- › **Zanzibar:** Island; key trading hub; later major center of the enslaved people trade
- › **Sofala:** Southern gateway connecting Great Zimbabwe's gold to Indian Ocean shipping

GOODS AND TRADE FLOWS

- › **Swahili Coast EXPORTS:** Gold (from Great Zimbabwe interior), ivory, enslaved people, iron, tortoiseshell
- › **Swahili Coast IMPORTS:** Indian cotton textiles, Chinese porcelain, Persian glassware, Arabian horses
- › Porcelain shards from China (Song/Ming) and glass beads from India have been excavated at Great Zimbabwe — physical evidence of Indian Ocean connectivity

ISLAM ON THE SWAHILI COAST

- › Arrived via Arab and Persian merchants from at least the 900s CE
- › African ruling elites converted to Islam for commercial advantage and political prestige
- › Mosques built in coral stone; Arabic used for religious and commercial purposes
- › **Syncretic:** Traditional Bantu African practices (ancestor veneration, local rituals) continued alongside Islamic worship
- › Swahili city-states were Muslim-ruled but population was mostly indigenous African — not Arab-colonized

GREAT ZIMBABWE — Interior Gold Source

- › Located in modern Zimbabwe; built by the **Shona people** c. 1100–1450
- › Massive stone enclosures (zimbabwe = 'great stone houses' in Shona)
- › Capital of a state controlling gold and cattle trade; gold moved east to Sofala/Kilwa → Indian Ocean
- › No written records — archaeological evidence only; Chinese porcelain found there proves Indian Ocean connections
- › **AP significance:** Shows complex state-building in sub-Saharan Africa WITHOUT Islamic influence (Great Zimbabwe was not a Muslim state)

AP TIP: Pair the Swahili Coast with Great Zimbabwe to show that East African trade connected INTERIOR agricultural states to COASTAL commercial cities to the GLOBAL Indian Ocean network.

SUMMARY — Write the main idea of this page in your own words:

Swahili Coast = East African city-states (Kilwa, Mombasa, Zanzibar) connected to the Indian Ocean trade. **Swahili culture** = synthesis of Bantu African + Arab-Islamic elements. Exports: gold (from Great Zimbabwe), ivory, enslaved people. Imports: Indian textiles, Chinese porcelain. Islam arrived via merchants, adopted syncretically. **Great Zimbabwe** = interior gold source; stone architecture without Islamic influence.

CUES & AP QUESTIONS

NOTES

Great Zimbabwe:

Who built it? When? What does it prove about Africa?

What was Great Zimbabwe's economic function?

Ethiopian Empire (Solomonid Dynasty):

What religion? How is it different from other African states?

AP EXAM TIP

Great Zimbabwe = AP's strongest evidence that complex, monumental state-building occurred in sub-Saharan Africa WITHOUT Islamic or European influence. Use it to counter any argument that African complexity depended on outside contact.

What does the word 'zimbabwe' mean?

COMMON MISTAKE

19th-century European colonizers falsely claimed Great Zimbabwe was built by Phoenicians or Arabs. Archaeological evidence conclusively shows it was built by the Shona people of Africa. Do not repeat this colonial myth.

What does African political diversity in this chapter tell us about 'state-building'?

GREAT ZIMBABWE (c. 1100–1450)

- › Built by the **Shona people** in modern Zimbabwe; peak population ~18,000
- › **Architecture:** Massive dry-stone walls up to 36 feet high, built without mortar — remarkable engineering achievement
- › Three sections: Hill Complex (royal/religious site), Great Enclosure (royal residence/ritual space), Valley Ruins (elite housing)
- › **Economy:** Controlled cattle herds and gold trade; gold moved east to Sofala and the Swahili Coast; imported goods (Chinese porcelain, Islamic glass beads) found in ruins
- › **Decline (c. 1450):** Likely due to soil exhaustion, overgrazing, and shifting trade routes — replaced by the Mutapa Kingdom

ARCHAEOLOGICAL SIGNIFICANCE

Great Zimbabwe is the largest pre-colonial stone structure in sub-Saharan Africa. The Chinese porcelain and Persian glass found in excavations physically prove its connection to the Indian Ocean trade network — even though it was 200+ miles inland. This is key AP evidence: **African states were globally connected.**

ETHIOPIAN EMPIRE (Solomonid Dynasty, c. 1270–1974)

- › Located in the East African highlands (modern Ethiopia/Eritrea)
- › **Christian kingdom** — one of the world's oldest Christian states (Christianity arrived c. 4th century CE)
- › The Solomonid dynasty claimed descent from King Solomon and the Queen of Sheba — providing religious legitimacy
- › **Lalibela:** Rock-hewn Christian churches (built c. 1200s) — extraordinary architectural achievement, a pilgrimage site
- › Maintained independence from Islamic expansion; traded with both the Islamic world and Christian Europe
- › **AP significance:** Shows African Christianity as an ancient, sophisticated tradition — not a European colonial import

AFRICA'S POLITICAL DIVERSITY — The Big Picture

- › **Islamic monarchies:** Mali (West Africa) — gold-trade wealth, Islamic governance, trans-Saharan connections
 - › **Indian Ocean city-states:** Swahili Coast — cosmopolitan, Muslim-led, trade-dependent
 - › **Interior kingdoms without Islam:** Great Zimbabwe — cattle/gold wealth, monumental stone architecture
 - › **Christian empire:** Ethiopia — ancient Christianity, highland agriculture, Red Sea trade
- This diversity shows that Africa cannot be generalized. AP essays should specify WHICH African state and WHICH network they are discussing.

AP TIP: Ethiopia's ancient Christianity challenges the assumption that Christianity came to Africa via European colonialism. Use Ethiopia as evidence that Africa had sophisticated religious traditions independently of European contact.

SUMMARY — Write the main idea of this page in your own words:

Great Zimbabwe (Shona people, c. 1100–1450) = monumental stone-walled capital controlling gold and cattle trade; Chinese porcelain found there proves Indian Ocean connectivity without direct coastal access. **Ethiopia** (Solomonid Dynasty) = Christian empire with rock-hewn churches predating European missionary activity. Africa's political diversity in this period: Islamic monarchies, Indian Ocean city-states, interior kingdoms, Christian empires — resist generalizations.

CUES & AP QUESTIONS

NOTES

How did Islam's adoption in Africa differ from its adoption elsewhere?

What 3 things did Islam bring to Africa beyond religion?

Give 2 examples of Islamic syncretism in West Africa.

AP EXAM TIP

Islam in Africa = always 'syncretic, not replacement.' African rulers often maintained **DUAL** authority — Islamic credentials for traders, traditional ritual authority for rural populations. This dual legitimacy is a high-scoring analytical point.

What is a griot? Why are they important as a historical source?

COMMON MISTAKE

Do NOT say Islam 'replaced' African traditions. In most of sub-Saharan Africa, Islam was layered on top of existing practices — traditional religious rituals, matrilineal inheritance, and local laws persisted alongside Islamic practice.

What was the social impact of trans-Saharan trade on West African societies?

HOW ISLAM ARRIVED IN AFRICA — NOT BY CONQUEST

- › West Africa: Arrived via trans-Saharan merchant caravans from North Africa (8th–11th centuries CE)
- › East Africa (Swahili Coast): Arrived via Indian Ocean trade, Arab and Persian merchants (7th–10th centuries CE)
- › **Political conversion:** Rulers converted to gain commercial networks, diplomatic prestige, and Arabic literacy for governance — NOT because they were forced to
- › Rural populations were often the last to convert — urban and elite classes converted first

WHAT ISLAM BROUGHT TO AFRICA

- › **Arabic literacy:** Trade contracts, legal records, religious texts — created literate administrative class
- › **Islamic law (sharia):** Standardized commercial contracts; enabled long-distance trade
- › **Education (madrasas):** Timbuktu became a major center; Mali rulers patronized Islamic scholars
- › **Architectural styles:** Mosques in West Africa blended Islamic forms with local mud-brick construction (e.g., Djenne mosque, Mali)

SYNCRETISM IN PRACTICE

- › **Dual authority:** Mansa Musa performed Hajj AND maintained traditional divine kingship rituals that shocked strict Islamic scholars (Ibn Battuta criticized Malian court practices as un-Islamic)
- › **Matrilineal inheritance:** Some West African societies maintained matrilineal succession even after converting to Islam (which is patrilineal)
- › **Traditional rituals:** Ancestor veneration, local spirit ceremonies continued alongside Friday prayers
- › **Dress and food:** Women's dress codes and food practices often did not conform to strict Islamic norms

GRIOTS — Oral Tradition and History

- › Hereditary caste of oral historians, musicians, and praise-singers in West African societies
- › Preserved genealogies, historical events, and oral epics (e.g., the Sundiata epic)
- › Performed for rulers at court; traveled between kingdoms carrying news and history
- › **AP significance:** Primary source for pre-literate African history; shows sophisticated historical consciousness without written records; demonstrates that oral tradition is as valid as written sources for historical analysis

SOCIAL STRUCTURE AND TRADE'S IMPACT

- › Trans-Saharan trade enriched a merchant class and royal families who controlled the routes
- › **Enslaved people trade** was embedded in trans-Saharan commerce — enslaved people moved north to North Africa and the Middle East (distinct from later Atlantic slave trade)
- › Islamic adoption brought new social distinctions: literate Islamic scholars gained status; traditional priests/diviners sometimes lost status

SUMMARY — Write the main idea of this page in your own words:

Islam in Africa spread via trade, not conquest, and was adopted **syncretically** — layered on top of existing traditions rather than replacing them. Islam brought **Arabic literacy, sharia contracts, madrasas, and architectural styles**. African rulers maintained **dual authority** (Islamic + traditional). **Griots** preserved oral history alongside Arabic written records. The enslaved people trade was embedded in trans-Saharan commerce.

CUES & AP QUESTIONS	NOTES
CCOT Framework: 3 continuities and 3 changes for Ch. 4 Top 3 AP essay prompts for Ch. 4: Key comparisons for Ch. 4 essays: AP EXAM TIP The #1 mistake on Africa essays: making general claims about 'Africa' when you should specify the REGION and STATE. West Africa (Mali), East Africa (Swahili Coast), and interior Africa (Great Zimbabwe) had very different histories. COMMON MISTAKES (1) Saying Islam 'conquered' Africa. (2) Saying Africa was 'isolated.' (3) Treating all of Africa as one region. (4) Forgetting that Great Zimbabwe was NOT Islamic. Key primary sources for Ch. 4 DBQs? Terms to define in essays:	CCOT FRAMEWORK FOR CHAPTER 4 › CONTINUITIES: Trans-Saharan and Indian Ocean trade routes active throughout Oral tradition (griots) maintaining historical memory Traditional religious practices coexisting with Islam Agricultural economies underpinning all states › CHANGES: Mali Empire rises (c. 1235) and reaches its peak under Mansa Musa (1312–1337) Islam's expanding presence in West and East Africa Great Zimbabwe's decline c. 1450 Swahili Coast cities grow richer through Indian Ocean connections › COMPLEXITY: Islam adopted syncretically — African traditions persist; Ibn Battuta's criticism shows gap between strict Islamic norms and African practice TOP AP ESSAY PROMPTS › 1. LEQ: 'Analyze the role of trade in the development of African states 1200–1450.' → Connect Mali (trans-Saharan gold), Swahili Coast (Indian Ocean), Great Zimbabwe (interior gold) to their respective networks › 2. SAQ: 'Explain ONE cause and ONE effect of Mansa Musa's pilgrimage to Mecca in 1324.' → Cause: Islamic faith + desire for prestige; Effect: inflation in Cairo, Mali on European maps, attraction of scholars to Timbuktu › 3. DBQ: 'Evaluate the extent to which Islam transformed African societies 1200–1450.' → Use syncretism as the key concept; argue transformation was partial and region-specific KEY AP-READY COMPARISONS › Mali vs. Aztec Empire: Both built on tribute extraction and control of trade routes; very different religious and cultural contexts › Mansa Musa's pilgrimage vs. Zheng He's voyages: Both demonstrated state wealth and global connections; one via religious obligation, one via state policy › Swahili Coast vs. SE Asian port cities: Both cosmopolitan, Islam via Indian Ocean trade, syncretic cultures › Great Zimbabwe vs. Angkor Wat: Both demonstrate monumental architecture and state power without written records (Zimbabwe) or European influence; both declined c. 1400–1450 KEY PRIMARY SOURCES FOR DBQs › Ibn Battuta's accounts of Mali: Muslim traveler; use for Islamic syncretism in Africa and Mansa Musa's court › Catalan Atlas (1375): Shows Mansa Musa on a map; evidence Mali's gold put West Africa on European radar › Archaeological evidence (Great Zimbabwe): Chinese porcelain = Indian Ocean connectivity without written records KEY TERMS TO DEFINE Trans-Saharan trade Griot Oral tradition Sundiata Mansa Musa Hajj Timbuktu Swahili Kilwa Great Zimbabwe Syncretism Dual authority Jizya Diaspora community Sahara as trade highway
SUMMARY — Write the main idea of this page in your own words:	

Ch. 4 AP mastery: (1) Connect each African state to its trade network (Mali → trans-Saharan; Swahili → Indian Ocean; Zimbabwe → interior); (2) Islam spread syncretically — **dual authority** persisted; (3) **Mansa Musa's pilgrimage** = best single piece of evidence for African wealth and global connections; (4) **Great Zimbabwe** = African monumental architecture WITHOUT Islamic influence. Never generalize 'Africa' — always specify the region.
